## Panic Button

## EDGEBITS PROVIDING ON-SCREEN PANIC BUTTON SOFTWARE FOR PRIMARY CARE

**EDGEALERT** was developed to meet the needs of Primary Care following the IT system supplier EMIS removing its panic button feature. The impact of this, requires practices to make new plans for dealing with emergency situations. GP Practices need an alternative software option that reduces the risk to personal safety and supports the NHS Zero Tolerance Policy.

EDGEBITS has a reputation for developing specific software solutions to meet the needs of Primary Care. Our mobile print management application, **EDGEPRINT**, is a fully automatic mobile printing SaaS solution. It facilitates a truly mobile primary care workforce and enables GPs and other practice staff to work seamlessly across multiple sites. Our panic button can be installed as a standalone application or combined with our mobile print management application.

**EDGEALERT** provides a safe and secure user experience for GP practice mobile users. It can also be used on static devices in the practice. It offers practices the ideal solution for a collective call for help in a primary care setting, alerting other members of staff that assistance is required.

### Key Features

The user friendly Panic Button is displayed on the user's desktop. It is easily accessible through a Hover Desktop Button icon. Clicking on the icon subtly alerts the team with an on-screen message that a colleague needs assistance and their location.

**EDGEALERT** can be preconfigured with all practice locations. Once the application is installed on a device it will automatically provide a list of locations for mobile users to choose from, based on their current practice location. With one click users can select their location. In addition, it provides a fixed option, which is remembered for static users.

Additional functionality means that the practice team can easily see which member of staff is logged in, in which location and which room giving the practice full visibility of the onsite workforce.

### Technical Highlights

- Fully compliant with Windows 10 and 11.
- Supports all clinical systems including: EMIS, TPP/SystemOne and Vision.
- Developed in .NET7.
- Future proofed with fully managed updates.
- Hosted in Microsoft Azure - UK South Data Centre.
- Compatible with Software Deployment Systems such as SCCM and Cetero etc.
